INVENTOR : KAWACHI FUJIO;

INT.CL. : B29C 70/30 // B29K 35:00 B29K105:12

TITLE : FIBER-REINFORCED RESIN MOLDING
AND METHOD FOR MANUFACTURING
THIS RESIN MOLDING

ABSTRACT : PROBLEM TO BE SOLVED: To provide a fiber-reinforced resin molding with a presentable appearance showing such advantages that a defoaming operation is easy and the productivity can be enhanced and further, the presence of air bubbles between a fiber-reinforced layer and a corrugated layer is almost not allowed without the generation of warpage due to heat shrinkage or curing shrinkage after molding and also the generation of a glass mark as well as a method for manufacturing this fiber-reinforced resin molding.

SOLUTION: This fiber-reinforced resin molding is structured of an intermediate layer 2 formed of a dicyclopentadiene unsaturated polyester resin containing an inorganic filler between a corrugated layer 1 and a fiber-reinforced resin layer 3. In addition, the fiber-reinforced resin layer 3 is formed of the dicyclopentadiene unsaturated polyester resin.
